

PIFT Medication Codes for Use with the MEMS Paper Run Report Form

Effective 03/10/07

March 9, 2007

Directions For Use

Starting January 1, 2007, a PIFT transfer will be defined as “. . . the transfer of a [stable] patient from one health care facility (hospital, clinic, SNF, rehab, etc.) to another.” while utilizing the expanded 2006 PIFT protocols for medication categories and devices. Medications found normally on the Maine EMS formulary are not considered PIFT medications unless utilized in the context of a PIFT transfer. Paramedics are asked to document a PIFT call in all cases where either the new 2006 protocols or a prior version were utilized during the transition period (January 1 to July 1, 2007). *****Important Note- Please begin charting transfers that involve specialty PIFT equipment beginning January 1, 2007 as PIFT calls. This would include the following devices:**

- IV pumps (only for medications on PIFT formulary in PIFT setting)
- Urinary Catheters/Continuous Bladder Irrigation- routine calls where the patient has a Foley in place are not PIFT calls but CBI will always be a PIFT call;
- Central Venous Access Devices that have already been accessed for medications or fluids being transported under PIFT guidelines
- Transvenous Pacemakers
- OG/NG tubes (clamped or to suction)
- Chest Tubes (clamped, water seal, or Heimlich valve)

Maine EMS is closely watching the implementation and progress of the 2006 PIFT Program. With your help, the data collected from your run sheets and QA forms will help track the progress and success of this important project. **Remember, it is the responsibility of the PIFT paramedic to complete the PIFT QA form for every PIFT call.**

If you have any questions about PIFT documentation, please refer to the PIFT Documentation Power Point presentation that can be found on the Maine EMS website or contact Scott Smith, Education Coordinator, at Maine EMS at (207) 626-3862 or scott.a.smith@maine.gov.

Tips for Use

Each category of medication included in the 2006 PIFT program has been assigned to a three-digit code group. The Maine Health Information Center (MHIC) will be updating their database to reflect these changes effective January 2007. **Please use the appropriate three-digit code for the medications you administered during the PIFT transfer.** The drugs are listed by category. Some drugs are listed in more than one category. The same drug should have the same number in both categories. Select the appropriate category for the medications being used and look for the drug the patient was receiving. Should the medication not be listed, please use the default code for the medication category and write in the name of the medication. You will note that these are listed as nos, meaning not otherwise specified. This will ensure that the appropriate data is captured in the MHIC database.

Maine EMS PIFT Program QA Form		
Service Medical Director Review _____ (sign) on _____ (date)		
Date _____	PCR # _____	Service # _____
Sending Facility _____		Paramedic Name _____
Receiving Facility _____		Lic # _____
Do not complete the transfer unless attending physician, on line medical control physician and OLMC contact number provided. Must also complete whether or not communication problems anticipated enroute. Attending physician: _____ OLMC: _____ Phone: _____ Communication Problems Anticipated: _____		
Stable <u>Moderate</u> ¹ / <u>Low</u> ² Risk (Circle one) Unstable On Arrival ³ Action: _____		
Vitals signs as documented on EMTALA form: Pulse: _____ Respirations: _____ Blood Pressure: _____ SaO ₂ %: _____		Vital Signs on arrival at facility: Pulse: _____ Respirations: _____ Blood Pressure: _____ SaO ₂ %: _____
List all medications and their rates/doses being administered during transport:		List any interventions performed or devices used enroute:
<input type="checkbox"/> Heparin _____	<input type="checkbox"/> IV Start	
<input type="checkbox"/> Nitroglycerine _____	<input type="checkbox"/> Intubation	
<input type="checkbox"/> Potassium _____	<input type="checkbox"/> CPR	
<input type="checkbox"/> TPN _____	<input type="checkbox"/> Defibrillation	
<input type="checkbox"/> Morphine _____	<input type="checkbox"/> Cardioversion	
<input type="checkbox"/> Other _____	<input type="checkbox"/> Other Airway Maintenance	
<input type="checkbox"/> Other _____	<input type="checkbox"/> Transvenous Pacing	
<input type="checkbox"/> Other _____	<input type="checkbox"/> Other	
<input type="checkbox"/> Other _____	<input type="checkbox"/> Other	
<i>Were there any titrations to medications or unscheduled boluses administered during transport? If so, list medication and dose/change:</i> _____ _____ _____	<i>Was contact with OLMC necessary during transport? If so, list what was requested and if received:</i> _____ _____ _____ Name of OLMC: _____	
Order sheet for all medications/interventions is completed, signed by Physician/PA/NP or by RN with Verbal Order, and accompanies patient chart.		
The transporting paramedic has the final decision whether or not they are comfortable in transporting the patient without additional hospital staff.		
1) Stable "Moderate Risk" Patient: A Stable patient is one who has hemodynamic and neurologic stability from therapies initiated. Therapies initiated must be expected to maintain patient stability during the transport. This patient is typically going via emergent transfer to a tertiary facility for services not readily available at a local facility. Variation on existing therapy has demonstrated no deterioration and may be reasonably predicted to remain without change during the transport without the need for further adjustments to such therapy.		
2) Stable "Low Risk" Patient: A patient who has hemodynamic and neurological stability with no foreseeable deterioration. This is the patient who is not suffering from an acute illness, but has medications or interventions being administered which are outside of the scope of the Paramedic without PIFT training.		
3) Unstable "High Risk" patients and those receiving interventions outside the scope of the PIFT module will require the sending facility to provide other appropriate staff to assure appropriate clinical care during transport.
